2 Title

Raspberry Pi Robo Rally

3 Proposal Statement

To design, implement and test an application capable of controlling a Raspberry Pi CamJam Robot from a mobile smartphone.

4 Objectives

- Discuss ways of controlling the Pi remotely and decide on primary course of action.
- Design and wireframe an application.
- Implement application in code, using software and examples provided by the instructor.
- Export application to an emulator or real device.
- Iteratively test design.
- Gather user feedback and update as necessary.

5 Potential Audience

The app must be user-friendly and accessible to a wide range of ages and technological abilities, from primary school children through to adults.

6 Recommended Hardware & Software

- Raspberry Pi 3 or Zero W
- CamJam Edukit 3
- Python Notebook via CoCalc (or via Idle 3 on a Raspberry Pi)

7 Required Timeframe

To be completed by the Technology Skills Workshops 15-19 January 2018.

8 Required Documentation

- Evidence of design and iterative process arriving at final product.
- Evidence of testing procedure.
- Evidence of feedback from project managers. This could be in the form of questionnaires or live feedback after a presentation to an audience.
- Evidence of updates must be provided.

-
- Justification of which feedback items were implemented in the final design. Evidence of justification can be provided in a report format or a presentation to an audience.

9 Things to Consider

1. Keep it simple!

- Your design does not have to be complicated.
- You would be better off with a simple design which works well, than a complicated one that no one can use.

2. Keep a record of **EVERYTHING** you do. It'll all help towards providing evidence for your assessment.

3. Keep in touch - if you feel like you're falling behind, let me know and we'll sort it out!

4. See 1.

- *Simple can be harder than complex; you have to work hard to get your thinking clean to make it simple. (Steve Jobs)*
